DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see pages 9-12, filed 6/7/2005, with respect to the rejection(s) of claim(s) 1-25 under 35 U.S.C. 112 and 35 U.S.C. 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of U.S. Patent # 6,683,631.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-25 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of U.S. Patent No. 6683,631. Although the conflicting claims are not identical, they are not patentably distinct from each other because patented claims are narrower than instant claims and do include all limitations of instant claims.

Art Unit: 2625

Specifically, the instant invention is a method and system of selecting continuous data and deselecting certain data from continuously selected data to form two non-continuous selected region and processing both regions without processing deselected regions. Patent invention is a same invention claiming selection and de-selection of the target information. The only difference between the claimed invention and patented invention is that patented invention does not clearly state deselecting information from continuously selected portion. However, patented invention does claim performing selecting and deselecting of the target information based on relative position of begin active delimiter and end active delimiter. This relative position include instant claimed limitation of portion of selected region because it falls between begin active delimiter position and end active delimiter. Therefore it would have been obvious for a person with ordinary skill in the art at the time the invention was made to incorporate deselecting portion of selected region in the patented claims because it provides ease of editing the selected data.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

Art Unit: 2625

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
